

Color Blindness Tests

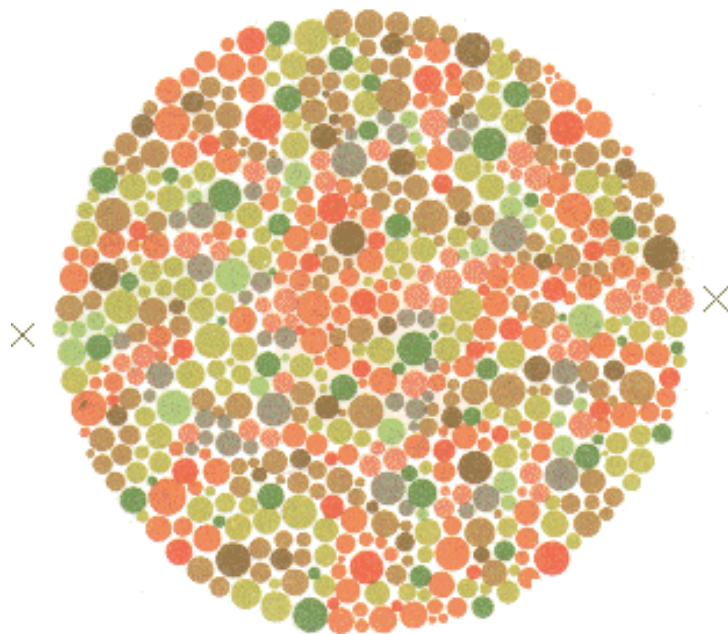

Everyone should be able to easily read the number in this circle. You should see the number 12.

People with normal vision should see the number 8. Red-Green colour deficiency should read 8. Total colour blindness should not see any number.

Most people with colour vision difficulties cannot read the number in this circle. Normal vision should read the number 6.

Most people with red-green colour blindness can trace the winding line between the two X's. Those with normal and total colour blindness cannot follow the line.
